

TURFFIT

WATERING YOUR TURF:

- Lawn turf is a perishable product and requires a substantial amount of watering. Drench your new lawn immediately after it has been laid, then a light watering at least twice a day (except on days of decent rainfall) for two weeks, this will ensure that the turf establishes a new root system quickly and stays healthy.
- Make sure the water penetrates right through the turf and into the prepared surface below.

WALKING ON YOUR NEW LAWN:

- Your new lawn will be soft underfoot for the first 10 days after being laid. It is **vital** that you avoid walking on the turf without the use of boards during this time period otherwise impressions of your footprints will be left in the lawn.
- Once the grass has rooted in, it will then be safe to walk on. A good indication of this is when it is physically difficult to pull the turf up from the ground.

MOWING YOUR LAWN:

- Once your lawn has established the new root system it is safe to mow. When mowing it is important that no more than 30% of the leaf area is cut off at one time:
 - o For example, if the grass height is 10cm, then you should mow it down to a height of 7cm.
 - o During periods of rapid growth (May-September) grass can be mown 2-3 times a week.
- Grass clippings make a good 'green fertilizer' however they should be removed occasionally to avoid a 'thatch' build-up.

FURTHER CARE:

- Light feeding during the summer, every 4-6 weeks, will keep your lawn healthy and reduce the risk of disease.
- If you have any questions or queries, contact us by email or through our Facebook page.

ENJOY YOUR NEW LAWN !

Please note that any issues or complaints relating to the product or work done must be logged with us within 7 DAYS as we have no control over how it is looked after and maintained once it has left our premises/after installation.
